

NAWL-A Worksheet

Complete cloze worksheet

Name: _____ Date: _____

Choose from each word bank. Write one word in each blank. Sets: 10.

Set 1 - Words 1-10

Word Bank: domain | repertoire | impact | denote | distribution | aspect | publish | obtain | dynamic | parameter

1. After years of performing in experimental theatre, the actress expanded her professional _____ to include comedy, tragedy, and musical roles.
2. Researchers were unable to _____ reliable data from the remote villages because several roads had been blocked by flooding.
3. The uneven _____ of medical resources across the country became obvious when rural hospitals ran out of basic equipment.
4. Before the experiment began, the team defined every _____ carefully so that later measurements would remain consistent.
5. One important _____ of the policy has been overlooked: how it affects families who depend on informal employment.
6. In a rapidly changing market, companies need a more _____ strategy rather than a fixed plan written years in advance.
7. The new transport system had a measurable _____ on air quality, especially in districts previously affected by heavy traffic.
8. Although psychology is his main _____, he often borrows methods from linguistics, computer science, and economics.
9. The journal refused to _____ the article until the authors provided stronger evidence for their main claim.
10. In this diagram, the black circles _____ confirmed cases, while the grey circles represent suspected but unverified cases.

Set 2 - Words 11-20

Word Bank: correlation | authority | ion | linguistic | matrix | semantic | cognitive | linear | par | graph

1. The health agency has the legal _____ to close restaurants that repeatedly fail basic hygiene inspections.
2. The distinction may look minor, but it reflects a deeper _____ difference between the two words in academic writing.
3. In finance, the bond was trading below _____, which worried investors who expected its value to remain stable.

4. A sodium _____ carries a positive charge after losing one electron, which changes how it behaves in solution.
5. The data were arranged in a large _____ so that each row represented a participant and each column represented a variable.
6. The engineer assumed a _____ relationship between pressure and temperature, although the real pattern later proved more complex.
7. Good reading instruction should support not only vocabulary growth but also broader _____ development in young learners.
8. Students were asked to _____ the results, making the trend easier to compare across different age groups.
9. The study found a strong _____ between sleep quality and memory performance, although it did not prove causation.
10. His research focuses on _____ variation, especially how pronunciation changes across regions and social groups.

Set 3 - Words 21-30

Word Bank: electron | receptor | velocity | discourse | acid | finite | induce | interval | vector | stimulus

1. The laboratory technician added a weak _____ to the solution, causing the indicator to change colour immediately.
2. Certain medicines may _____ sleep, but doctors usually warn patients not to rely on them every night.
3. The car's _____ increased sharply as it moved downhill, forcing the driver to brake before entering the tunnel.
4. Participants completed the same memory task after a short _____, allowing researchers to compare immediate and delayed recall.
5. Public _____ around climate policy often becomes emotional when economic costs are discussed alongside environmental responsibility.
6. The committee had only a _____ amount of funding, so it could not support every promising research proposal.
7. In the experiment, the flashing light acted as a visual _____ that triggered a rapid response from the animal.
8. In mathematics, a _____ has both magnitude and direction, making it different from a simple scalar quantity.
9. When an atom gains an extra _____, its overall electrical charge becomes negative rather than neutral.
10. The hormone binds to a specific _____ on the cell surface before sending a signal into the cell.

Set 4 - Words 31-40

Word Bank: spatial | coefficient | developmental | algorithm | theorem | molecular | transformation | fluid | bound | translation

1. The proof of the _____ was difficult, but it established a relationship that later became central to modern geometry.
2. Search engines use a complex _____ to rank pages, combining relevance, popularity, and user behaviour signals.
3. During the storm, water behaved like a powerful _____, moving through narrow streets and carrying debris with it.
4. The psychologist studied _____ changes in children, paying particular attention to language, memory, and social awareness.
5. Because the contract had already been signed, the company was legally _____ to deliver the equipment by Friday.
6. At the _____ level, even a tiny structural change can alter how a drug interacts with the body.
7. The city's economic _____ was not sudden; it resulted from decades of investment in education and infrastructure.
8. Good architects must consider _____ relationships carefully, especially how people move between rooms and public areas.
9. The regression _____ was positive, meaning that higher levels of education were associated with higher reported income.
10. The English _____ of the poem preserved the general meaning, but it lost some of the rhythm and ambiguity.

Set 5 - Words 41-50

Word Bank: empirical | neuron | lexical | marker | simulation | robot | membrane | molecule | variance | regime

1. The cell _____ controls which substances can enter or leave, helping maintain a stable internal environment.
2. A single _____ can transmit electrical signals to thousands of other cells through complex networks in the brain.
3. The flight _____ allowed trainee pilots to practise emergency procedures without exposing passengers to real danger.
4. In second-language research, _____ knowledge includes not only word meaning but also collocation and appropriate usage.
5. The authoritarian _____ restricted independent media and punished journalists who questioned official economic statistics.

6. High _____ in test scores suggested that students differed widely in their preparation, even within the same class.
7. Water is a simple _____, but its unusual properties make it essential for biological systems and climate processes.
8. The blood test identified a biological _____ that may help doctors detect the disease at an earlier stage.
9. The claim sounded persuasive, but it lacked _____ support from controlled studies or reliable field observations.
10. The factory introduced a _____ to handle repetitive welding tasks that were dangerous and physically exhausting for workers.

Set 6 - Words 51-60

Word Bank: diagnosis | statistical | partial | candidate | identification | vowel | node | intensity | equilibrium | regression

1. The report used advanced _____ methods to estimate how income, education, and location influenced voting behaviour.
2. In English, the sound /i/ is a long _____, as in the words “see” and “machine”.
3. After several hours, the chemical reaction reached _____, meaning the forward and reverse processes occurred at equal rates.
4. The _____ of the earthquake was so great that buildings hundreds of kilometres away still shook slightly.
5. The economist used linear _____ to examine whether housing prices could be predicted from interest rates and population growth.
6. An early _____ allowed doctors to begin treatment before the infection spread to the patient’s lungs.
7. Biometric _____ systems can recognise individuals by comparing fingerprints, facial features, or patterns in the iris.
8. Each _____ in the network stores information and passes signals to neighbouring units when certain conditions are met.
9. The leading _____ promised to reform education, but critics questioned whether her plan was financially realistic.
10. The committee gave only _____ approval because several safety documents still needed to be reviewed.

**Set 7 - Words 61-70**

Word Bank: duration | behavioral | particle | consumption | temporal | sensitivity | correlate | mortality | antibody | bilingual

1. Researchers tried to _____ stress levels with sleep patterns, but the relationship became weaker after controlling for income.
2. Child _____ rates fell sharply after clean drinking water and vaccination programmes became more widely available.
3. The vaccine stimulates the body to produce an _____ that can recognise and neutralise the virus more quickly.
4. In grammar, _____ expressions such as “before” and “after” help organise events in relation to time.
5. A dust _____ may be too small to see, yet it can still affect air quality and human health.
6. The _____ of the interview was limited to thirty minutes, so several important questions were left unanswered.
7. The school introduced a _____ intervention to reduce bullying by changing peer norms and classroom routines.
8. Excessive energy _____ remains a major environmental problem, especially in cities with inefficient transport systems.
9. Growing up in a _____ household can influence pronunciation, vocabulary choice, and cultural identity in complex ways.
10. The instrument’s _____ was high enough to detect tiny changes in temperature that ordinary thermometers would miss.

Set 8 - Words 71-80

Word Bank: phonological | explicit | mutation | integration | onset | optimal | colonial | similarity | spectrum | nucleus

1. The two studies show a clear _____ in design, although their conclusions about student motivation are quite different.
2. For long-term health, the _____ amount of exercise depends on age, medical history, and individual recovery capacity.
3. The teacher gave _____ instructions about citation rules because previous essays had included several serious referencing errors.
4. A genetic _____ can be harmless, beneficial, or dangerous, depending on where it occurs and how it affects protein function.
5. The country’s _____ history still shapes its legal system, language policy, and patterns of economic inequality.

6. Political opinions exist on a broad _____, so reducing every position to “left” or “right” can be misleading.
7. Children with _____ difficulties may struggle to recognise rhyme, syllable patterns, or subtle differences between speech sounds.
8. The cell’s _____ contains most of its genetic material and controls many essential biological processes.
9. The sudden _____ of fever and chest pain led doctors to suspect a serious respiratory infection.
10. The successful _____ of migrant students requires language support, academic guidance, and social inclusion.

Set 9 - Words 81-90

Word Bank: orientation | pathway | inequality | calculation | proposition | dominant | syntactic | coordinate | precede | subset

1. The _____ political party controlled parliament for more than a decade, making major reforms difficult for smaller groups.
2. Scientists have identified a biological _____ that explains how stress can influence inflammation and immune responses.
3. The project manager had to _____ the work of designers, engineers, and marketing staff across three different time zones.
4. A small error in the final _____ changed the predicted cost of the bridge by several million dollars.
5. In formal ceremonies, senior officials usually _____ junior members when entering the hall or signing official documents.
6. The research focused on a _____ of patients who had received treatment within six months of diagnosis.
7. A _____ analysis examines how words are arranged in a sentence rather than only what individual words mean.
8. The university’s _____ programme helps international students understand academic expectations before regular classes begin.
9. The philosopher defended the _____ that moral responsibility requires the ability to make genuine choices.
10. Income _____ increased during the crisis as asset owners benefited while low-paid workers lost hours and wages.

Set 10 - Words 91-100

Word Bank: trait | prediction | generalize | identical | pulse | differential | correspondence | norm | beam | prevalence

1. The twins looked almost _____, but close friends could still distinguish them by their voices and gestures.
2. The survey measured the _____ of asthma among children living near busy roads and industrial areas.
3. A _____ equation describes how a quantity changes continuously, making it useful in physics, engineering, and economics.
4. Researchers should not _____ from a small urban sample to the whole population without stronger supporting evidence.
5. The laser _____ was directed at the sensor, allowing scientists to measure extremely small changes in distance.
6. The patient's _____ became irregular after the surgery, so nurses monitored his heart rate throughout the night.
7. In this school, completing homework before class is considered the _____ rather than an unusual sign of motivation.
8. Curiosity is a valuable _____ in researchers because it pushes them to question easy explanations and examine evidence carefully.
9. The economist's _____ about inflation proved inaccurate because energy prices rose much faster than expected.
10. There was a close _____ between the two maps, suggesting that poverty and poor transport access often overlapped.
