

## BBC 6 Minute English Listening Practice

### Can AI Solve Crime?

Name: \_\_\_\_\_

Class: \_\_\_\_\_

Score: \_\_\_\_\_ / 20

| No. | Sentence                                                                                |
|-----|-----------------------------------------------------------------------------------------|
| 1   | Real police investigations are different from what people often see on _____.           |
| 2   | Solving crimes involves collecting and reviewing lots of _____.                         |
| 3   | This work takes a lot of _____.                                                         |
| 4   | Alastair is interested in AI because his professional background is in _____.           |
| 5   | When officers review large amounts of information, it can be hard to find useful _____. |
| 6   | AI may improve police _____ by speeding up this work.                                   |
| 7   | There is renewed _____ in pattern-recognition evidence.                                 |
| 8   | Examples include finger marks and _____.                                                |
| 9   | This type of evidence became less popular partly because of interest in _____.          |
| 10  | A possible concern is that AI would require collecting lots of _____.                   |

11 **How are real police investigations described in the programme?**

- A They are usually the same as television murder mysteries.
- B They depend mainly on one detective's personality.
- C They involve practical evidence-gathering and review.
- D They are mostly solved by guessing the criminal's motive.

12 **What problem could AI help with in police work?**

- A Making police investigations more entertaining.
- B Reducing the time needed to review evidence.
- C Replacing all traditional forms of evidence.
- D Deciding whether a crime has happened.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **Why is Alastair interested in artificial intelligence?**
- A He works in policing and has investigation experience.
  - B He designs fictional detective programmes.
  - C He is building a robot detective.
  - D He wants to replace police training completely.
- 14 **What does Alastair mean by asking "What can it do for me?"**
- A He wants to know how AI may be practically useful.
  - B He wants AI to explain its personal opinions.
  - C He is asking whether AI can watch detective dramas.
  - D He is unsure what artificial intelligence means.
- 15 **What is difficult when police officers have a lot of information to review?**
- A Knowing what matters and finding relevant patterns.
  - B Choosing which television detective to copy.
  - C Avoiding all forms of forensic science.
  - D Taking photographs with mobile phones.
- 16 **What development does Ruth Morgan describe?**
- A A new interest in evidence based on recognising patterns.
  - B A complete end to the use of fingerprints.
  - C A move away from all forensic science.
  - D A system where witnesses replace physical evidence.
- 17 **Why did pattern-recognition evidence become less popular for a time?**
- A DNA evidence attracted more excitement.
  - B Police officers stopped collecting physical evidence.
  - C Databases became illegal in all investigations.
  - D Marks from shoes and fingers disappeared.
- 18 **How could AI make marks from a crime scene useful?**
- A By comparing a photo of a mark with a database quickly.
  - B By asking witnesses to describe the mark from memory.
  - C By changing the mark to match a suspect.
  - D By removing the need to collect evidence.

19 **What is the broader benefit of AI when dealing with evidence patterns?**

- A It can make pattern-finding quicker and more dependable.
- B It can prove that every suspect is guilty.
- C It can remove the need for human police officers immediately.
- D It can stop crimes before they happen.

20 **What concern is raised about using AI to solve crimes?**

- A It may require access to large amounts of private information.
- B It cannot recognise any kind of physical evidence.
- C It would make databases too slow to use.
- D It would make DNA evidence more popular.
