

BBC 6 Minute English Listening Practice

What Decides Our Taste?

Name: _____

Class: _____

Score: _____ / 18

No.	Sentence
1	Both our _____ and DNA influence taste.
2	Scientists identified cells called _____ in the tongue's taste buds.
3	Differences in the receptors people are born with suggest taste can be partly _____.
4	Early genetic studies involved only a few _____.
5	Researchers later studied people of _____ ancestry.
6	One researcher describes taste as a matter of _____ rather than simply opinion.
7	The researcher compares differences in taste with being _____.
8	The comparison asks why people feel free to _____ a friend's sense of taste.
9	A wine judge acknowledges the _____ of individual taste.
10	During judging, people are expected to set aside their _____.

11 **Which idea best explains why people may disagree about the taste of the same food?**

- A Each person learns a different set of food rules.
- B Experts give people conflicting advice about food.
- C Inherited biology can affect how each person tastes it.
- D Familiar foods change flavour as people get older.

12 **Where are the taste receptors discussed in the recording located?**

- A In the taste buds on the tongue.
- B In the nerves around the mouth.
- C In the nose above the mouth.
- D In the brain behind the eyes.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **What limited the researchers' first picture of human taste?**
- A They studied too many kinds of food at once.
 - B They drew evidence from a narrow ancestry group.
 - C They focused on wine judges rather than ordinary people.
 - D They assumed all taste receptors were on the tongue.
- 14 **What changed when the studies included people from more ancestry groups?**
- A Researchers found taste differences were less important.
 - B Researchers decided that taste was only an opinion.
 - C Researchers recognised greater human variation in taste.
 - D Researchers replaced genetic studies with wine competitions.
- 15 **Why does the researcher compare taste with colour-blindness?**
- A To show that both conditions prevent people from enjoying food.
 - B To suggest that both conditions can be corrected by practice.
 - C To argue that both conditions should be judged by experts.
 - D To question why people criticise others for a biological difference.
- 16 **Why is the value of wine competitions questioned?**
- A Different people may experience taste differently by nature.
 - B Judges may not know which wines are most popular.
 - C Competitions may include too few kinds of wine.
 - D Critics may use unfamiliar words to describe flavours.
- 17 **What does the judge's "I would say that, wouldn't I?" suggest about his defence of wine competitions?**
- A He has forgotten the challenge put to him.
 - B He knows his role may favour a "no" answer.
 - C He believes all judges share identical tastes.
 - D He plans to stop judging future competitions.
- 18 **What does the instruction to "park" prejudices imply about wine judging?**
- A Judges should refuse to discuss wines they dislike.
 - B Judges should record their favourite flavours first.
 - C Judges should rely on their personal tastes alone.
 - D Judges should try to keep personal preferences out of their decisions.
