

BBC 6 Minute English Listening Practice

Did Taylor Swift Fans Cause an Earthquake?

Name: _____

Class: _____

Score: _____ / 16

No.	Sentence
1	At the Edinburgh concert, fans' _____ was linked to measurable movement of the Earth.
2	The disturbance was detected as far as _____ from the concert.
3	At the Cardiff show, instruments allowed _____ and recording of ground motion.
4	The upper graph showed the ground's _____ as it vibrated up and down.
5	The movement reflected the combined energy of _____ people in the stadium.
6	The fans made _____ movements, so their energy combined.
7	The graph reached a high point during the song _____.
8	The ground bent up and down by about _____.
9	Attempts to express concert energy on an earthquake scale generally produced magnitudes of _____.
10	An actual earthquake involves a break in the _____.

11 **What made the Edinburgh concert an unusual example of a live music event?**

- A The sound could be heard four miles away.
- B The performers felt the stage shake beneath them.
- C The audience's movement registered beyond the venue.
- D The audience left because of an earthquake warning.

12 **Why did the researchers prepare equipment for the Cardiff concert?**

- A To check whether a similar ground effect would occur there.
- B To compare the songs played at the two venues.
- C To measure how far the music travelled through the air.
- D To test whether the stadium could withstand an earthquake.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **How did the crowd produce the recorded effect?**
- A Their separate movements cancelled one another out.
 - B Their movements together contributed to the ground vibration.
 - C Their singing alone pushed air against the ground.
 - D Their movement began only after the ground shook.
- 14 **How is the small measurement of ground movement presented?**
- A As small in size but still a real bending of the Earth.
 - B As too uncertain for the scientists to take seriously.
 - C As proof that the concert damaged the ground.
 - D As larger than the movement from an earthquake.
- 15 **Why are moving tectonic plates and volcanoes mentioned?**
- A To explain how concerts can trigger those natural events.
 - B To identify places where concert vibrations are strongest.
 - C To suggest two methods for measuring concert energy.
 - D To identify natural causes in the definition of an earthquake.
- 16 **Which conclusion best fits the discussion as a whole?**
- A Any detectable ground movement should count as an earthquake.
 - B Concertgoers may feel an earthquake-like effect without a real earthquake occurring.
 - C Concerts cannot move the Earth unless its crust breaks.
 - D A concert's measured magnitude alone explains its natural cause.
