

BBC 6 Minute English Listening Practice

Sharing the Road with Driverless Cars

Name: _____

Class: _____

Score: _____ / 16

No.	Sentence
1	With a human driver, a person outside the car can make _____ to help decide who should move first.
2	One road user says he might feel a little _____ when crossing in front of a robotaxi.
3	Because accidents may happen when approaching danger is unseen, a researcher wants to improve driverless cars' _____.
4	Two kinds of signals were tested: moving displays called _____ and a fixed light display.
5	Runners and cyclists have _____ to decide what to do, so a quick look may miss a moving display.
6	One example shows a _____ to indicate that crossing is safe.
7	The team used _____ to warn faster-moving road users instead.
8	In one culture, a wave of the hand can mean " _____ ", inviting another road user forward.

11 **What central difficulty arises when a driverless car meets someone outside it?**

- A The car cannot identify the person's planned route.
- B The person lacks a human driver to signal who should move first.
- C The person cannot know who is riding inside the car.
- D The car cannot be seen by anyone on the road.

12 **How does one road user say he might respond to a robotaxi at a crossing?**

- A He might let it pass and cross behind it.
- B He might signal for it to stop and cross first.
- C He might follow it to another road junction.
- D He might remain inside until it has passed.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **What change does one speaker cautiously expect as driverless cars become more familiar?**
- A People may no longer need to choose when to cross.
 - B People may learn to stop the cars whenever they wish.
 - C People may better judge how and when to cross near them.
 - D People may avoid all roads used by the cars.
- 14 **Why does a researcher want driverless cars to stand out more clearly?**
- A Road users often disagree about hand gestures.
 - B Cyclists may not follow the same legal rules.
 - C Human drivers sometimes miss the pedestrians ahead.
 - D Accidents may happen when approaching danger is unseen.
- 15 **Why did the moving displays work less well for runners and cyclists than for pedestrians?**
- A The displays could only be seen at crossings.
 - B Faster users might not take in an animation during a glance.
 - C The images showed a message meant for cyclists only.
 - D The displays changed meaning between different cultures.
- 16 **What does the hand-waving example show about road communication?**
- A A gesture is clear only when it lasts a long time.
 - B A gesture is understood identically in all countries.
 - C The same gesture can carry different cultural meanings.
 - D Hand movements are always clearer than light signals.
- 17 **How does the speaker contrast jaywalking in South Korea and the UK?**
- A It is accepted in both places but less common in Korea.
 - B It is common in Korea but rare in the UK.
 - C It is illegal in the UK but accepted in Korea.
 - D It is illegal in Korea but frequent in the UK.
- 18 **What broader point follows from the comparison of jaywalking habits?**
- A Local road behaviour can affect conditions for autonomous cars.
 - B Legal penalties alone decide whether autonomous cars are safe.
 - C Autonomous cars are safe only where jaywalking is illegal.
 - D Rare jaywalking removes the need for vehicle warning signals.
