

BBC 6 Minute English Listening Practice

Climate Change and Extreme Weather

Name: _____

Class: _____

Score: _____ / 18

No.	Sentence
1	Weather is experienced day by day, while climate describes _____ conditions.
2	Tropical storms are large systems with _____ movement.
3	They form over _____.
4	In the Indian Ocean, these storms are called _____.
5	Scientists think storms may become _____ as they move across an area.
6	Rain over one area may last longer, increasing _____.
7	Compared with landslides, mudslides tend to be faster and _____.
8	After heavy rain, either kind of slide can damage _____.
9	Sea levels are getting _____; this may make surges more dangerous.
10	A surge may reach a height of _____.

11 **How does the opening distinction compare weather with climate?**

- A Weather concerns longer periods than climate does.
- B Weather and climate describe the same time span.
- C Weather is experienced daily; climate spans longer periods.
- D Climate is observed only during tropical storms.

12 **Why do hurricanes, cyclones and typhoons have different names?**

- A They develop in different parts of the world.
- B They rotate at different rates over water.
- C They reach different levels of destruction.
- D They form at different stages of warming.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **What change do climate scientists anticipate as the world warms?**
- A Tropical storms will become easier to predict.
 - B Tropical storms will become more destructive.
 - C Tropical storms will form only in warmer seas.
 - D Tropical storms will stop changing their names.
- 14 **How may slower movement make a storm more damaging in one area?**
- A It reduces the wind but delays the rain.
 - B It creates more storms over the same sea.
 - C It keeps wind and rain over the area longer.
 - D It moves floods away from populated areas.
- 15 **What limitation would a building-only assessment of landslides and mudslides have?**
- A It would misidentify the place where a slide began.
 - B It would overstate the damage suffered by buildings.
 - C It would treat landslides as faster than mudslides.
 - D It would overlook possible deaths and injuries.
- 16 **Why is a storm surge singled out as a major danger within a storm?**
- A It is the only part of a storm that can move inland.
 - B It can cause more casualties than any other element.
 - C It prevents the storm's winds from becoming stronger.
 - D It makes all other forms of flooding impossible.
- 17 **What drives the rapid rise of seawater during a storm surge?**
- A Strong storm winds push the sea towards land.
 - B Heavy rainfall pulls seawater into the clouds.
 - C Moving rocks force seawater over the shore.
 - D A falling sea level exposes the ocean floor.
- 18 **What follows from the two kinds of harm described when a surge reaches land?**
- A Damage to buildings is the only harm to consider.
 - B Protecting buildings would also protect every person.
 - C People face danger only at the maximum surge height.
 - D Protecting buildings alone may leave people at risk.
