E-rickshaws Driving Away Pollution

Name: _____

Class: _____

Score: _____ / 18

NO MORE THAN THREE WORDS - Who is changing?

No.	Sentence
1	The move to electric vehicles includes workers from _____ groups, as well as richer buyers.
2	Small vehicles called _____ are common on Indian roads; more than half now use electricity.
3	The benefits depend partly on the power supply: over three quarters of India's electricity still comes from _____.
4	One key advantage is _____; they suit people's everyday travel needs.
5	They are also _____, so more people can manage the purchase price.
6	Their spread has been helped by a shortage of frequent, high-quality _____.
7	A sharp rise in _____ has contributed to dangerous smog in Delhi.
8	Children are especially exposed because they are closer to _____.
9	In winter, severe pollution may cause school _____ lasting weeks.
10	By 2030, it wants _____ of vehicles on the road to be electric.

11 **Which tension does the introduction raise about electric vehicles in India?**

- A They are affordable for most workers but have gained little public interest.
- B They can be costly, yet their use has spread beyond wealthy buyers.
- C They are common among wealthy buyers but unavailable to poorer workers.
- D They are cheaper than conventional cars but have made little climate impact.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 12 **What does the figure for India's small two- and three-wheeled vehicles show?**
- A Electric models make up a small but rapidly increasing minority.
 - B Electric models have replaced nearly every petrol-powered vehicle.
 - C Most electric vehicles there are larger private cars.
 - D Electric models now account for a majority of these small vehicles.
- 13 **What follows from the discussion of electricity generation?**
- A An EV's environmental value also depends on how its power is produced.
 - B An EV offers no environmental advantage until all coal use has ended.
 - C The type of power station matters less than the vehicle's purchase price.
 - D Coal-generated power is the main reason small vehicles became popular.
- 14 **Why did two- and three-wheelers become widespread, according to the climate specialist?**
- A They replaced an established metro network whose services became costly.
 - B They met demand created by a sudden ban on conventional cars.
 - C They offered a practical response to inadequate frequent public transport.
 - D They were introduced mainly to support a new government funding plan.
- 15 **What different roles do electric scooters and petrol cars have in the Delhi discussion?**
- A Scooters worsen the city's smog, while petrol cars fill a transport gap.
 - B Both are presented chiefly as solutions to weak public transport.
 - C Both are described chiefly as causes of the same health problem.
 - D Scooters can fill a travel gap, while petrol-car growth has increased smog.
- 16 **What is a reasonable implication of the explanation about children and exhaust pipes?**
- A Children are less affected because they spend less time on the road.
 - B Reducing traffic pollution could particularly benefit children.
 - C School closures protect children from every source of air pollution.
 - D Adults are exposed to more exhaust because they are taller.
- 17 **How does the interviewer regard closing schools during bad pollution?**
- A As an effective long-term substitute for changing transport.
 - B As a costly measure best replaced by improvements to school buildings.
 - C As a troubling response that does not solve the pollution itself.
 - D As a sign that the main pollution sources are inside schools.

18 **What role does the funding play in the government's transport plan?**

- A It uses public investment to encourage the switch to electric vehicles.
- B It expects every road vehicle to be electric before 2030.
- C It plans to spend the entire sum on closing polluted schools.
- D It has already achieved its target through voluntary purchases alone.
