

BBC 6 Minute English Listening Practice

AI to Reduce Animal Testing

Name: _____

Class: _____

Score: _____ / 14

NO MORE THAN THREE WORDS - Why tests are used and debated

No.	Sentence
1	Alongside product safety, animal tests explore how _____ a new medicine is.
2	Scientists who support the practice say it has saved _____.
3	In Britain, medicines have to be tested on _____ of animals.
4	A substance found harmful to animals may nevertheless be safe in _____.
5	The animal-welfare aim is a _____ in the number of animals used, while safety is still maintained.
6	Assessing possible harm involves the _____ of thousands of experimental results.
7	Scientists must examine a large quantity of _____ when judging chemical safety.
8	A possible reduction in testing could benefit both modern medicine and _____.

11 How do the two sides of the animal-testing debate differ?

- A Supporters stress human safety; campaigners question both welfare and effectiveness.
- B Both accept the tests as accurate but disagree about their cost.
- C Supporters seek fewer medicines; campaigners seek more safety checks.
- D Both question animal welfare but disagree about which species to use.

12 What has led groups on both sides of the debate to reconsider animal testing?

- A A change in the number of legally required animal types.
- B New evidence that medicines affect all species alike.
- C The possible contribution of artificial intelligence.
- D A decision to begin tests with human volunteers.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **What does the example of substances toxic to animals but safe for humans suggest?**
- A Animal tests can help identify every risk to humans.
 - B A substance safe for one species is usually safe for another.
 - C Substances harmful to animals should first be tested on people.
 - D Animal results do not always predict human results reliably.
- 14 **Why is AI potentially useful when assessing whether a new medicine may harm people?**
- A It can remove the need to examine experimental results.
 - B It is good at analysing very large amounts of data.
 - C It can ensure all experimental results agree.
 - D It can rule out the need to assess newly invented chemicals.
- 15 **Why may the work of assessing chemical safety keep growing?**
- A New chemicals continue to be created alongside the existing data burden.
 - B Existing data become unusable whenever a chemical is invented.
 - C Scientists must repeat all previous tests for every new medicine.
 - D AI generates more chemicals than scientists can evaluate.
- 16 **Which conclusion best reflects the discussion's view of AI and future animal testing?**
- A AI has already made testing on animals unnecessary.
 - B AI may help reduce or eventually end such testing, but it is only part of the solution.
 - C AI offers no benefit until it can replace every safety check.
 - D AI will certainly end animal testing within a few years.
