

BBC 6 Minute English Listening Practice

Can Climate Change Affect Our Mental Health?

Name: _____

Class: _____

Score: _____ / 20

No.	Sentence
1	Climate change can affect people's _____.
2	Disasters such as floods and wildfires can destroy _____.
3	People in affected areas may experience _____.
4	Trauma involves very bad and _____ emotional effects.
5	The expert describes climate trauma as _____ rather than merely private.
6	Because of this, recovery requires _____.
7	Individuals with stronger _____ from family are generally more resilient.
8	Resilience is also linked to _____ with the community.
9	A survivor volunteered with a _____.
10	One positive result was work on a _____.

11 **What is the main point made about climate trauma?**

- A It is mostly a medical condition treated by individuals alone.
- B It happens only when people directly lose their homes.
- C It is less serious than other effects of climate change.
- D It affects communities and therefore needs collective recovery.

12 **Which factor is linked with greater resilience after climate-related disasters?**

- A Avoiding discussion of the disaster within the family.
- B Feeling supported by family and connected to the community.
- C Moving away from the affected area as quickly as possible.
- D Depending mainly on expert treatment rather than neighbours.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **How does the interviewer respond to the expert's community-based explanation?**
- A She finds the idea especially noteworthy and interesting.
 - B She doubts whether community healing can happen after disasters.
 - C She treats the explanation as obvious and unimportant.
 - D She shifts the focus away from mental health entirely.
- 14 **Why can strong community ties help people after disasters?**
- A They prevent natural disasters from damaging homes.
 - B They remove the need for families to offer support.
 - C They make people more able to recover from difficulty.
 - D They guarantee that trauma will disappear immediately.
- 15 **What contrast is drawn between climate trauma and individual trauma?**
- A Climate trauma is short-term, while individual trauma lasts longer.
 - B Climate trauma affects whole communities, not only separate people.
 - C Climate trauma is caused by emotions, while individual trauma is physical.
 - D Climate trauma is solved by experts, while individual trauma is solved locally.
- 16 **What view of rebuilding is suggested in the discussion?**
- A Repairing social connections is part of the healing process.
 - B Rebuilding should focus on buildings rather than relationships.
 - C Communities recover best when people work separately.
 - D Emotional recovery is unrelated to community structure.
- 17 **In the phrase about how "it rebuilds and reknits together", what does "it" refer to?**
- A A psychiatric condition.
 - B A single survivor's home.
 - C A support organisation.
 - D The affected community.
- 18 **What can be inferred from the wildfire survivor's volunteer work?**
- A He wanted to leave the damaged town permanently.
 - B He thought the fire had made community work unnecessary.
 - C He turned personal loss into efforts to strengthen the area.
 - D He believed only children needed support after the fire.

19 **Why are the children mentioned in the survivor's description?**

- A To show that children were unaffected by the wildfire.
- B To illustrate that resilience spread across the community.
- C To explain why the community plaza was built for schools.
- D To compare young people's trauma with adults' trauma.

20 **What overall implication does the discussion leave?**

- A Climate change affects property more than mental wellbeing.
- B Community recovery is useful only after the physical rebuilding ends.
- C Collective support can help people cope with climate-related trauma.
- D Natural disasters create stronger communities without extra effort.
