Score: _____ / 20

No.	Sentence
1	In Britain, about _____ of adults are estimated to weigh more than the healthy range.
2	Drugs such as Ozempic and Mounjaro are adapted forms of _____ found in the body.
3	These medicines copy the body's signal that makes people feel _____ for longer.
4	After taking Mounjaro, one listener lost _____ within half a year.
5	She said she no longer felt hungry, so the repeated mental pressure around eating, known as _____, stopped.
6	A long-term inner argument about food harmed her _____.
7	These medicines were first developed to treat _____, not to reduce body weight.
8	This condition is linked to excessively high _____.
9	Weight loss was first noticed as a _____ of the diabetes medication.
10	UK public health advice suggests the drugs should not replace a _____.

11 **What problem is introduced before the discussion of weight loss drugs?**

- A Exercise routines are becoming less popular among adults.
- B Healthy habits do not help everyone maintain a healthy weight.
- C Most British adults refuse to change their eating habits.
- D New medicines have made diet and exercise unnecessary.

12 **How are the drugs said to support weight loss?**

- A They increase the amount of exercise people can do.
- B They remove sugar from food before it is digested.
- C They permanently change the body's natural hormones.
- D They extend the feeling of fullness so people eat less.

Answers written in the margins will not be marked.

Answers written in the margins will not be marked.

- 13 **What change is reported in the listener's experience with Mounjaro?**
- A She lost a substantial amount of weight and felt more positive about it.
 - B She stopped taking the medicine after six months because of hunger.
 - C She became unsure whether the drug had any real effect.
 - D She used the drug mainly to improve her running performance.
- 14 **In this context, what does "food noise" mainly refer to?**
- A The physical sound made while preparing meals.
 - B A medical warning that food has too much sugar.
 - C Unwanted thoughts and judgement connected with eating.
 - D A strict diet plan that tells people what not to eat.
- 15 **What does the "angel and devil" image suggest about her relationship with food?**
- A She enjoyed choosing between two equally healthy diets.
 - B She experienced a repeated internal struggle over eating.
 - C She believed other people were controlling her meals.
 - D She wanted to eat only foods that were considered forbidden.
- 16 **What long-term effect did this inner conflict have?**
- A It made her more disciplined about daily exercise.
 - B It encouraged her to study nutrition professionally.
 - C It helped her separate hunger from temptation.
 - D It weakened her confidence in herself over many years.
- 17 **What contrast is made about the original purpose of these medicines?**
- A They were first intended for diabetes, not weight loss.
 - B They were first sold for obesity, then withdrawn for diabetes.
 - C They were created for mental health before being used for appetite.
 - D They were designed as lifestyle products rather than medical treatments.
- 18 **What did doctors notice when the diabetes medicine was used?**
- A Patients needed a higher dose of insulin.
 - B Patients stopped experiencing all side effects.
 - C Patients were also losing weight.
 - D Patients no longer needed any medical advice.

19 **In the explanation, why is the side effect described as unusual in this case?**

- A It was impossible for doctors to observe it at first.
- B It was normally undesirable, but here it helped patients.
- C It had no connection with the medicine's original use.
- D It affected only people who did not have diabetes.

20 **What caution is given near the end of the discussion?**

- A Medication should be combined with broader healthy-living support.
- B People should avoid using these drugs under all circumstances.
- C The drugs have been proven to solve obesity by themselves.
- D Public health officials believe lifestyle advice is no longer useful.
